

[SINGLE USE LYOPHILIZED RNASE REAGENTS, AND KITS AND METHODS FOR USING SAME]

Abstract

A single use reagent article which comprises: (a) a holder; and a premeasured single use quantity of at least one lyophilized RNase associated with the holder. This reagent article can be used in a wide variety of biological kits and biological methods, such as molecular biological kits and methods for isolating DNA, where a known quantity of RNase(s) is needed having relatively consistent and stable activity. The reagent article is relatively easy to use and can minimize potential errors to due to user variability.
